A storm system tracking from Texas eastward across the Gulf States, spread light snow into central Illinois on February 5th. Accumulations generally ranged form 1 to 3 inches, but increased to as much as 4 inches across east-central Illinois from Champaign-Urbana to Danville and Paris. As a result of snow-covered roads, 4 people were killed in traffic accidents.

A low pressure system tracked from Texas into the Ohio River Valley, bringing widespread snow to central Illinois on February 8th and 9th. Most locations north of the I-70 corridor picked up between 3 and 6 inches of snow, with the heaviest amounts in excess of 6 inches occurring west of the Illinois River. Once the system moved east of the area, gusty northwesterly winds caused considerable blowing and drifting snow through the night of February 9th.

Low pressure tracking from Missouri into northern Ohio brought a mix of rain and snow to parts of central Illinois. The heaviest snow with this system fell along and west of the Illinois River, where widespread amounts of 5 to 8 inches were observed. Further east, temperatures remained warm enough to support mostly rain along and east of I-55.
